

## SIGNATURE SNARE DRUM MIKE BORDIN CUSTOM MODEL

SD6465MB

**2mm Thick Copper Shell Features a Hand Hammered Lower Half and a Thick, Black Clear Finish to Deliver Massive Sound**

### Powerful Heavy Metal

The 2mm thick copper shell wholly characterizes the innovative style of metal drummer Mike Bordin. To obtain the sound Mike was looking for we formed deep, 14" X 6.5" shell design, hand-hammered only the lower half of the shell, then applied a thick, black clear finish to the entire shell. This snare drum is massive, feels heavy in the hand, and delivers huge low-end tone with excellent response.

### Black Finished Dynahoop Rims and Small Lugs

The shell is fitted with a pair of 2.3mm steel Dynahoop rims that are done in a matching black finish. They create a solid, well-focused sound that complements the copper shell well. Rims combined with our small round lugs make for a unique combination.

### Strainers

Strainers utilized on the Mike Bordin signature snare consist of an H type strainer on the release side and a DC type on the butt side. Strainers are designed to minimize surface contact between the shell and the strainer while delivering a natural sound from the shell.

### ■ SPECIFICATIONS
